**PROCEDURE:** CR Lumbar (SPINE LUMBOSACRAL 4+V)

**HISTORY:**

Low back pain

**TECHNIQUE:**

AP lateral flexion and extension images of the lumbar spine were obtained.

No prior studies were available for comparison.

**FINDINGS:**

5 non rib-bearing lumbar vertebral bodies are identified. There is minor scoliosis of the spine convex to the right. Bone mineralization appears within normal limits. No acute fractures are identified. There is no evidence of spondylolysis or spondylolisthesis. The imaged paravertebral soft tissue structures appear unremarkable. Sacrum and sacroiliac joints are intact.

No abnormal motion is appreciated.

**IMPRESSION:**

1. Minor scoliosis the spine convex the right.
2. No evidence of fracture, spondylolysis, or spondylolisthesis.
3. No abnormal motion on the lateral flexion and extension images is appreciated.
