Reason for Interfacility Transfer: Trauma/Orthopedic Specialty Care

Payment Information
CMS Condition: Major Trauma
Scene Information
Description: Secured heli-pad at BVCHD
First Agency Unit on Scene?: Yes
Num. Patients On Scene: 1
Patient Belongings: Glasses, cell phone, wallet
Level of Care per Protocol: Critical Care

Chief Complaint (Category: Trauma, Adult)
Hip pain
Duration: 6 Hours
Anatomic Location: General/Global
Patient Activity: Activity, unspecified

History of Present Illness
H285 dispatched to Bear Valley Community Hospital for interfacility transfer of 87 year old male involved in an MVC earlier this evening. Patient was diagnosed with a non-displaced right iliac fracture and required transfer to LLUMC for trauma services not available at referring facility. Patient was driver of vehicle traveling approximately 35 mph when the other vehicle collided with his 3 o'clock. Negative loss of consciousness, altered mental status, headache, nausea/vomiting, or chest pain. H/H WNL. CT head, neck, spine cleared by sending MD. Patient diagnosed with L5 compression fracture, right iliac fracture, right iliac hematoma, and abrasions to right hand. Patient has history of right hip replacement and exhibited shortening of right lower extremity which was normal for patient. Patient required air transport due to blood capabilities should patient condition deteriorate and time sensitive nature of patient's condition. Estimated ground transport time of 90 minutes vs air transport of 15 minutes.

Initial Physical Findings			

Initial Physical Findings

Assessment

Assessment at 06/30/2024 23:24

Bilateral Eye: Reactive , PERRL , 3-mm

Chest: Normal

Chest Exam Finding Not Present: Pain

Chest Findings: No abnormalities found on chest. Negative crepitus, instability, flail segment, paradoxical movement, unequal chest rise/fall, or pain.

Extremities: Motor Function-Normal , Pulse-Normal , Sensation-Normal

Extremities Findings: Pulse,. motor, sensation, circulation intact on all extremities throughout. Right leg exhibited shortening, which was stated to be normal for patient due to right hip replacement.

Face Findings: symmetric face

Generalized Ab: Normal

Generalized Ab Findings: Abdomen soft/supple. Negative distention, rigidity, guarding, evisceration, rebound tenderness, pulsating masses, bleeding, or contusions.

Head Exam Finding Not Present: Pain

Head Findings: No abnormalities found on head. Negative instability, crepitus, deformities, hematoma, raccoon eyes, battle signs, or bleeding.

Mental Status: Normal Baseline for Patient , Oriented-Event , Oriented-Time , Oriented-Person , Oriented-Place

Neck Findings: No abnormalities found on neck. Negative tracheal deviation, JVD, subcutaneous emphysema, step-off, crepitus, instability or point tenderness.

Neurological: Normal Baseline for Patient , Strength-Normal , No deficit noted , Speech Normal , Strength-Symmetric

Pelvis/Genitourinary: Pelvic Fracture

Pelvis/GU Exam Finding Not Present: Pelvic Instability

Pelvis/GU Findings: Non-displaced right iliac fracture. Negative instability, crepitus, priapism, bleeding, or incontinence. Pelvis was bound with a tied blanket for patient comfort.

Right Dorsal Hand: Abrasion , Bleeding Controlled , Motor Function-Normal , Pulse-Normal , Sensation-Normal

Right Dorsal Hand Findings: Abrasions to right hand. Sutures and bandage in place from sending facility. Pulse, motor, sensation, circulation intact.

Right Wrist Findings: bruising noted to wrist -wrapped in kerlix possibly from previous IV attempt or from MVC today

Skin: Dry , Warm , Capillary Nail Bed Refill less than 2 seconds
