HISTORY: This is a very pleasant 75-year-old female who was a restrained driver involved in a motor vehicle accident on 02/29/24. The patient was rear-ended by a truck. This was a hit-and-run accident. She denies lapse of consciousness. There was no airbag deployment. Sometime after the accident, she went to Sharp emergency room where she was evaluated. The patient has developed a significant component of neck pain with radiating pain, numbness and weakness into the right upper extremity. She has severe pain into the right shoulder. She is unable to lift her right arm over her head. Currently, she rates her pain level as 10/10 on a pain scale. The patient has been taking ibuprofen for the pain. She is also having difficulty sleeping secondary to the above symptomatology. The patient is here for a neurosurgical opinion.

PAST MEDICAL HISTORY: Gastric reflux.

PAST SURGICAL HISTORY: Surgery for ectopic pregnancy.

ALLERGIES: No known drug allergies.

CURRENT MEDICATIONS: Ibuprofen as needed for pain;
Tylenol as needed for pain; Omeprazole.

DISCUSSION OF PRIOR INJURIES: The patient is unable to recall any symptoms related to the cervical spine prior to this motor vehicle accident. The patient is unable to recall ever being evaluated by a healthcare professional for the cervical spine prior to this motor vehicle accident.

SOCIAL HISTORY: The patient does not smoke. She is single and she is retired.

REVIEW OF SYSTEMS: Negative for cough or dyspnea on exertion.

FAMILY HISTORY: Brother with a bleeding disorder.

PHYSICAL EXAMINATION: Blood pressure 149/81, pulse 78, temperature 97.8, respirations 16, height 5'1", weight 132 lbs.

Neurologic- The patient is awake, alert, and oriented to month, day, place, and time.

Cranial nerves- Extraocular movements are intact with no diplopia. Visual fields are full to bedside confrontation. Pupils are equally round and reactive to light and accommodation. The patient has symmetric facial sensation, symmetric facial movement, symmetric palate elevation, and midline tongue protrusion. No stridor or hoarseness.

Motor- 4/5 right deltoid, bicep, tricep, wrist extension, wrist flexion, and grip strength; 5/5 left deltoid, bicep, tricep, wrist extension, wrist flexion, and grip strength. 5/5 bilateral knee extension, knee flexion, foot dorsiflexion, plantar flexion, and EHL.

Sensory- Intact to pinprick and vibratory sensation in both hands and in both lower extremities.

Reflexes- 3+ bilateral biceps, triceps, and brachioradialis. 3+ bilateral patellar and ankle jerk reflexes.

Cardiac- Regular rate and rhythm. No murmurs, clicks, gallops, or rubs.

Lungs- Clear to auscultation bilaterally. No wheezes, rales, or rhonchi.

Abdomen- Soft, nondistended, nontender, with normal bowel sounds.

Extremities- 2+ carotid artery pulses bilaterally. No evidence of carotid bruits. There is significant discomfort elicited with passive range of motion of the left shoulder. Positive Spurling's maneuver. Positive Faber's on the right.

ASSESSMENT: Ms. Martinez is a very pleasant 75-year-old female who was involved in a motor vehicle accident on 02/29/24. The patient is having neck pain with radiating pain and weakness into the right upper extremity. She may also have an injury to the right shoulder.

PLAN:

1. MRI without contrast of the cervical spine.
2. X-rays of the cervical spine to rule out instability.
3. A soft cervical collar to be worn for a period of rest.
4. Prescription for a Medrol Dosepak and Prilosec, 20 mg. The patient is instructed to hold off on taking ibuprofen while on the Medrol Dosepak.
5. Referral to orthopaedics for evaluation of the right shoulder.
6. The patient will return to the clinic after the above studies. Further treatment recommendations will be given after review of the above mentioned imaging studies.
