

Physical Therapy Initial Evaluation

Date of Visit:	03-28-24	Treating Therapist:	Alexander Rheaume, PT, DPT
Patient Name:	Martinez, Lelia	Referring MD:	Felix Matthew Regala,
Patient #:	0150875	Payor:	* Batta Fulkerson Law
Date of Birth:	11-09-1948	Visit Number:	1
Age:	75	Total Time:	60 minutes
		Treatment Time:	09:15a - 10:15a
		Certification Period:	03-28-24 - 05-08-24

Date of Onset: 02-29-24

Diagnosis:

M25.511 Pain in right shoulder
M54.2 Cervicalgia

SUBJECTIVE:

Lelia Martinez is a 75 year old female who presents to therapy today for evaluation of Neck. The patient was referred by Felix Matthew Regala. She reports date of injury to be 2/29/24. Reported mechanism of injury was a car accident. She states that she was rear-ended in a hit-and-run accident. She felt dizzy after the accident, but had no loss of consciousness. However, she has been experiencing R shoulder pain since the accident that occasionally affects her neck. MD referral also suggests C/S HNP.

Frequency of symptoms: constant
Quality of pain: ache, stabbing intermittently
Aggravating factors: reaching OH, reaching behind back, dressing, household ADLs
Alleviating factors: rest, warm compress

History of smoking: none
History of urinary incontinence: none
Falls in the past year: none. Number of injuries from falls: none
Occupation: Retired
Occupational Demands: n/a
Recreational/Exercise Activities: walking as tolerated

Presenting Problems:

The patient reports today's pain at R shoulder/neck to be 8 out of 10 at best and 10 out of 10 at worst.
Comments: Current pain: 9/10
Pain will be assessed at regular intervals. Pain is assessed on verbal pain rating.

MEDICAL HISTORY

Current Injury

Patient: Lelia Martinez DOB: 11-09-1948

3975 5th Avenue, Suite 100 San Diego, CA 92103-3108
Phone: (619) 238-4318 Fax: (877) 298-4204

History of Current Condition:

R Shoulder/Neck Pain s/p MVA in Feb, 2024

Medical Conditions

Do you have any medical condition you currently suffer from or have experienced in the past?

Yes

The patient reports the following Medical Conditions:

- Hypertension

Current Medications

The patient takes medications and/or over the counter supplements.

Medication	Dose	Frequency	Method
Amlodipine			
Ibuprofen			

Pain Drawing

-	Less pain	\	Numbness
+	More pain	n	Pins and Needles
X	Burning	PU	Pre-ulcerative
C	Callus	R	Redness
D	Dryness	c	Sharp and Stabbing
g	Dull and Achy	S	Swelling
F	Fissure	U	Ulcer
M	Maceration	W	Warmth

Falls Risk Assessment

Number of falls reported in the past year: 0. Resulting in injury: No.

OBJECTIVE:

Objective Performance test: NT

SHOULDER EVALUATION

RANGE OF MOTION:

Shoulder	Initial	Goal	Comments
Right AROM	03-28-24		
Flexion (180)	114	180	
Abduction (180)	56	180	
IR (70-90)	74	70	
ER (70-90)	30	80	

Left shoulder active range of motion is unremarkable.

Cervical	Initial	Goal	Comments
AROM	03-28-24		
Flexion (80-90)	23	60	
Extension (70-80)	27	50	
Right Rotation (70-90)	38	80	

Patient: Lelia Martinez DOB: 11-09-1948

3975 5th Avenue, Suite 100 San Diego, CA 92103-3108
Phone: (619) 238-4318 Fax: (877) 298-4204

Phase of Care: 3

Total Time-Based Treatment Codes (minutes): 40 minutes

ASSESSMENT:

Patient presents with signs and symptoms consistent with c/s HNP and potential shoulder impingement. Skilled Therapy is necessary to address impairments, limitations, and functional deficits outlined, and return patient to their expected level of function.

Identified Impairments: decreased ROM and strength of R shoulder, decreased ROM of C/S, postural deficits, (+) Hawkin's-Kennedy, Neer, and empty can tests and functional deficits

Identified Activity Limitations/Performance Deficits Resulting from Impairments: Difficulty with reaching OH, reaching behind back, dressing, and household ADLs.

Response to Treatment: Good response to manual therapy, HEP therex, and stretches without significant aggravation of symptoms.

HEP/PT Instruction: See attached.

Patient: Lelia Martinez DOB: 11-09-1948

3975 5th Avenue, Suite 100 San Diego, CA 92103-3108

 WWW.SPINEANDSPORT.COM

Objective measures will be used to chart progress. Pt understands and agrees with this treatment plan. The patient's rehab potential is good. She and/or family is aware of her diagnosis. The plans and goals have been developed and discussed with the patient. Patient consents to treatment plan and goals and gives verbal informed consent.

Goals	Short-Long	Time Frame	Result	Comment
Patient will be independent in progressive monitored HEP.	Short Term	4 weeks	New	
Improve all shoulder strength by 1 grade to assist with ADL's.	Long Term	6 weeks	New	
Able to complete all ADL with no inc in symptoms.	Long Term	6 weeks	New	
Quick DASH will improve by 9-11 points (MCID)	Long Term	6 weeks	New	
All R shoulder ROM grossly WFL	Long Term	6 weeks	New	
All cervical spine ROM grossly WFL	Long Term	6 weeks	New	

Assessment of Complexity:

Medical and Therapy History: No personal factors and/or comorbidities that impact the plan of care.

Patient Examination: Examination of body systems was completed using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions.

Clinical Presentation: With stable and/or uncomplicated characteristics.

Clinical Decision Making: Low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome.

Based on the documented information above, the patient complexity is determined to be low.

MIPS Quality Measures

Measure 130: Documentation of Current Medications in the Medical Record

Eligible clinician attests to documenting in the medical record they obtained, updated, or reviewed the patient's current medications.

Measure 181: Elder Maltreatment Screen and Follow-Up Plan

Elder maltreatment screen documented as negative, follow-up is not required.

Measure: 182: Functional Outcome Assessment

Functional outcome assessment documented as positive using a standardized tool AND a care plan based on identified deficiencies is documented within two days of the functional outcome assessment: Therapeutic exercises, therapeutic activity, manual therapy, functional lifting, modalities as needed

Measure: 128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up

BMI is documented within normal parameters and no follow-up plan is required.

Measure 155: Falls: Plan of Care

Patient has not had more than 2 falls or any falls with injury in the past year.

Measure 48: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months

Presence or absence of urinary incontinence assessed: negative

Patient: Lelia Martinez DOB: 11-09-1948

3975 5th Avenue, Suite 100 San Diego, CA 92103-3108
Phone: (619) 238-4318 Fax: (877) 298-4204
WWW.SPINEANDSPORT.COM

PLAN:

The patient's treatment will include ADL Training, Modalities as needed, manual therapy, Soft Tissue Mobilization, neuromuscular re-education, mechanical traction, therapeutic activities and therapeutic exercises. The patient will be seen 2 times per week for 6 weeks, for a total of 12 visits.

Thank you for your referral. We will keep you updated on this patient's progress.

Best regards,

Alexander Rheaume PT, DPT

Service Based Activities	Comment	Status	Time	Done Today	CPT	Performed by
Moist Heat			8	Yes	Hot/Cold Pack (97010) - [TM001]	ARBA (PT) Arlyn Bacallan

Phase of Care: 3

Unless otherwise indicated, all direct services were provided by the physical therapist on today's visit including POC. All other services including components of the exercise flow sheet, or other specific task directed by PT were provided by Maya Berkman, SPT under the orders, direction, and immediate supervision of the PT.

Total Time-Based Treatment Codes (minutes): 52 minutes

ASSESSMENT:

The patient is able to perform exercises with good form but increased pain. The patient's progress towards goals is good and her tolerance to treatment is good. Patient consents to treatment plan and goals and gives verbal informed consent. STM effleurage and petrissage was performed on biceps and brachioradialis as well as Grade I and II distraction to decrease pain with PROM in flexion and abduction was performed to increase ROM. Pt responded well noting significant decrease in pain. Pt was introduced to supine flex, abd, and ER gravity assisted stretch as well as wall walks for flexion and IR towel stretch with pt education to avoid level in which pain is noted. Pt was introduced to scapular retraction with BIL ER with YTB and rows at 3# to begin strengthening exercises. Moderate verbal and visual cueing was required to maintain proper form during strengthening exercises and stretching such as wall walks. Will continue to progress pt as tolerated. Plan to introduce ER/IR walkouts with YTB next session as tolerated. Session was ended with MHP to right shoulder with good response to modalities. Skin intact.

Unless otherwise indicated, all direct services were provided by the physical therapist on today's visit including POC. All other services were provided by Maya Berkman, SPT under the orders, direction, and immediate supervision of the PT.

Phase of Care: 3

Unless otherwise indicated, all direct services were provided by the physical therapist on today's visit including POC. All other services including components of the exercise flow sheet, or other specific task directed by PT were provided by the tech under the orders, direction, and immediate supervision of the PT.

Total Time-Based Treatment Codes (minutes): 42 minutes

ASSESSMENT:

The patient is able to perform exercises with good form but increased pain. The patient's progress towards goals is good and her tolerance to treatment is good. Patient consents to treatment plan and goals and gives verbal informed consent. Pt tolerated treatment well with no adverse response. Incorporated YTB IR walkouts into therex without symptom provocation. Ended tx c heat. Will continue to monitor and progress.

Unless otherwise indicated, all direct services were provided by the physical therapist on today's visit including POC. All other services including components of the exercise flow sheet, or other specific task directed by PT were provided by the tech under the orders, direction, and immediate supervision of the PT.

Goals	Short-Long	Time Frame	Result	Comment
Patient will be independent in progressive monitored HEP.	Short Term	4 weeks	New	
Improve all shoulder strength by 1 grade to assist with ADL's.	Long Term	6 weeks	New	
Able to complete all ADL with no inc in symptoms.	Long Term	6 weeks	New	
Quick DASH will improve by 9-11 points (MCID)	Long Term	6 weeks	New	
All R shoulder ROM grossly WFL	Long Term	6 weeks	New	
All cervical spine ROM grossly WFL	Long Term	6 weeks	New	

PLAN:

Lelia will continue therapy as prescribed. This is visit # 10.

Best regards,

Jenna Mayeda-Jones DPT

Physical Therapy Progress Note

Date of Visit:	05-03-24	Treating Therapist:	Jenna Mayeda-Jones, DPT
Patient Name:	Martinez, Lelia	Referring MD:	Kristopher Downing,
Patient #:	0150875	Payor:	* Batta Fulkerson Law
Date of Birth:	11-09-1948	Visit Number:	11
Age:	75	Total Time:	60 minutes
		Treatment Time:	09:56a - 10:56a
		Certification Period:	05-04-24 - 06-14-24

Date of Onset: 02-29-24

Diagnosis:

M25.511 Pain in right shoulder
M54.2 Cervicalgia

SUBJECTIVE:

Lelia Martinez, attended for therapy evaluation on 03-28-24 for evaluation of Neck, Right Shoulder. The patient has attended 11 treatment sessions since the evaluation.

Presenting Problems:

The patient reports today's pain at R shoulder/neck to be 4 out of 10 at best and 8 out of 10 at worst.

Comments: Current pain: 6/10

Pain will be assessed at regular intervals. Pain is assessed on verbal pain rating.

Functional Status	Prior	Current
Activities of daily living	Moderate difficulty	Moderate difficulty
Lifting items from floor	Moderate difficulty	Moderate difficulty
Mobility	Moderate difficulty	Moderate difficulty

Patient reports 45% improvement since starting therapy. Patient would like to continue addressing improving ROM, strength, postural endurance, and decreasing pain.

Quick DASH

Score: 48 No. of Responses: 11 Total: 84.00

Q-DASH 84.00% disability/impairment where 0% represents ideal function.

Sports Score: No. of Responses: 0 Total: NA

Work Score: No. of Responses: 0 Total: NA

Patient: Lelia Martinez DOB: 11-09-1948

Neck Disability Index

Score: 58% - Severe Impairment

OBJECTIVE:**SHOULDER EVALUATION****RANGE OF MOTION:**

Shoulder	Initial	Goal	Last	Current	Comments

Phase of Care: 3

Unless otherwise indicated, all direct services were provided by the physical therapist on today's visit including POC. All other services including components of the exercise flow sheet, or other specific task directed by PT were provided by Maya Berkman, SPT under the orders, direction, and immediate supervision of the PT.

Total Time-Based Treatment Codes (minutes): 52 minutes

ASSESSMENT:

Patient presents with signs and symptoms consistent with c/s HNP and potential shoulder impingement.

PN: 5/4/24 Pt has completed 9/12 visits of skilled therapy and demonstrated 45% progress. Objective measures reveal improvements in cervical ROM and shoulder strength. QuickDASH score improved from 85 to 84 and NDI regressed from 44% to 58% indicating regression from moderate to severe impairment. Pt continues to demonstrate impaired cervical strength and shoulder ROM. Functionally, patient demonstrates difficulty with reaching OH, reaching behind back, dressing, and household ADLs. Recommend continue with therapy for 2 times a week for 6 weeks to focusing on decreasing pain and improving strength and ROM.

Unless otherwise indicated, all direct services were provided by the physical therapist on today's visit including POC, goal assessment, measurements, and outcome measures. All other services were provided by Maya Berkman, SPT under the orders, direction, and immediate supervision of the PT. The patient's rehab potential is good. The patient's discharge prognosis is good.

The patient appears motivated and is able to perform exercises correctly with good form but increased pain. The patient's

Physical Therapy Daily Note

Date of Visit: 06-01-24
Patient Name: Martinez, Lelia
Patient #: 0150875
Date of Birth: 11-09-1948
Age: 75

Treating Therapist: Jenna Mayeda-Jones, DPT
Referring MD: Felix Matthew Regala,
Payor: * Batta Fulkerson Law
Visit Number: 15

Total Time: 60 minutes
Treatment Time: 08:15a - 09:15a
Certification Period: 05-04-24 - 06-14-24

Date of Onset: 02-29-24

Diagnosis:

M25.511 Pain in right shoulder
M54.2 Cervicalgia

SUBJECTIVE:

The patient reports today's pain at R shoulder/neck to be 4 out of 10 at best and 8 out of 10 at worst.

Comments: Current pain: 7/10

Pain will be assessed at regular intervals. Pain is assessed on verbal pain rating.

Pt reports 7/10 p! in her shoulder. Pt states taking pain medications today.

ACTIVITY LOG:

Time Based Activities	Comment	Status	Sets	Reps	Weight	Time	Done Today	CPT	Performed by

Phase of Care: 3

Unless otherwise indicated, all direct services were provided by the physical therapist on today's visit including POC, manual therapy. All other services including components of the exercise flow sheet, or other specific task directed by PT were provided by the tech under the orders, direction, and immediate supervision of the PT.

Total Time-Based Treatment Codes (minutes): 50 minutes

ASSESSMENT:

The patient is able to perform exercises with good form but increased pain. The patient's progress towards goals is good and her tolerance to treatment is good. Patient consents to treatment plan and goals and gives verbal informed consent. Pt tolerated treatment well with no adverse response. Verbal and tactile cues to assist in table slides engaging full ROM if tolerated. Introduced pt to cervical isometrics with YSB without adverse response. Wall slides were adjusted to table slides and chin tags in supine position for better muscle facilitation. Will continue to progress as tolerated by pt. Session was ended with MHP applied to the right shoulder.

Unless otherwise indicated, all direct services were provided by the physical therapist on today's visit including exercise progression and assessed POC, manual therapy. All other services including components of the exercise flow sheet, or other specific task directed by PT were provided by Julia Cramp, PT Tech under the orders, direction, and immediate supervision of Jenna Mayeda-Jones, DPT.

Physical Therapy Progress Note

Date of Visit:	06-17-24	Treating Therapist:	Arlyn Bacallan, PT
Patient Name:	Martinez, Lelia	Referring MD:	Felix Matthew Regala,
Patient #:	0150875	Payor:	* Batta Fulkerson Law
Date of Birth:	11-09-1948	Visit Number:	18
Age:	75	Total Time:	60 minutes
		Treatment Time:	09:00a - 10:00a
		Certification Period:	06-17-24 - 07-28-24

Date of Onset: 02-29-24

Diagnosis:

M25.511 Pain in right shoulder
M54.2 Cervicalgia

SUBJECTIVE:

Lelia Martinez, attended for therapy evaluation on 03-28-24 for evaluation of Neck,. The patient has attended 18 treatment sessions since the evaluation.

Presenting Problems:

The patient reports today's pain at R shoulder/neck to be 4 out of 10 at best and 8 out of 10 at worst.

Comments: Current pain: 7/10

Pain will be assessed at regular intervals. Pain is assessed on verbal pain rating.

Functional Status	Prior	Current
Activities of daily living	Moderate difficulty	Moderate difficulty
Lifting items from floor	Moderate difficulty	Moderate difficulty
Mobility	Moderate difficulty	Moderate difficulty

Patient reports current pain level 5/10, pain at best 4/10, pain at worst 7/10. Patient reports 50% improvement since starting therapy. Patient would like to continue addressing pain with turning head to the right, decreased ROM, and decreased strength.

Neck Disability Index completed on 06-17-24

Score: 42% - Moderate Impairment

OBJECTIVE:

SHOULDER EVALUATION

Patient: Lelia Martinez DOB: 11-09-1948

RANGE OF MOTION:

Phase of Care: 3

Unless otherwise indicated, all direct services were provided by the physical therapist on today's visit including POC, manual therapy. All other services including components of the exercise flow sheet, or other specific task directed by PT were provided by the tech under the orders, direction, and immediate supervision of the PT.

Total Time-Based Treatment Codes (minutes): 50 minutes

ASSESSMENT:

Patient presents with signs and symptoms consistent with c/s HNP and potential shoulder impingement.

PN: 6/17/24 Pt has completed 9/12 visits of skilled therapy and demonstrated 50% progress. Objective measures reveal improvements in cervical ROM and shoulder ROM/strength. NDI regressed from 58% to 42% indicating an improvement from severe to moderate impairment. Patient continues to demonstrate impaired cervical strength and shoulder ROM. Functionally, patient demonstrates difficulty with reaching OH, reaching behind back, dressing, and household ADLs. Recommend continue with therapy for 2 times a week for 6 weeks to focusing on decreasing pain and improving strength and ROM. Patient would benefit from additional skilled therapy to further address impairments. Patient demonstrated good tolerance towards POC. Patient is able to complete all PREs without adverse reaction. Continue monitoring form and
