

Physical Therapy Initial Evaluation

Date of Visit:	05-24-24	Treating Therapist:	Arlyn Bacallan, PT
Patient Name:	Martinez, Lelia	Referring MD:	Kristopher Downing, MD
Patient #:	0150875	Payor:	* Batta Fulkerson Law
Date of Birth:	11-09-1948	Visit Number:	1
Age:	75	Total Time:	45 minutes
		Treatment Time:	10:00a - 10:45a
		Certification Period:	05-24-24 - 07-04-24

Diagnosis:

M25.511 Pain in right shoulder

SUBJECTIVE:

Lelia Martinez is a 75 year old female who presents to therapy today for evaluation of Shoulder. The patient was referred by Kristopher Downing , MD. She reports date of injury to be 2 months ago. Reported mechanism of injury was from a MVA and rear ended.

Frequency of symptoms: intermittent

Quality of pain: dull ache

Aggravating factors: difficulty reaching behind back and lifting overhead.

Alleviating factors: acetaminophen 1000 mg, Heat

History of smoking: none

History of urinary incontinence: difficulty getting to the bathroom.

Falls in the past year: 0. Number of injuries from falls: 0

Occupation: retired

Occupational Demands: none

Recreational/Exercise Activities: walk 2 blocks

Presenting Problems:

The patient reports:

- Awakened by pain, severe
- Difficulty dressing, severe
- Loss of motion - stiffness, severe
- Lifting, severe
- Reaching overhead, severe

The patient reports today's pain at Shoulder to be 3 out of 10 at best and 9 out of 10 at worst.

Comments: Current pain: 7/10. Pain will be assessed at regular intervals. Pain is assessed on verbal pain rating.

MEDICAL HISTORY

Current Injury

Patient: Lelia Martinez DOB: 11-09-1948

3975 5th Avenue, Suite 100 San Diego, CA 92103-3108
Phone: (619) 238-4318 Fax: (877) 298-4204
WWW.SPINEANDSPORT.COM

History of Current Condition:

Patient presents with signs and symptoms consistent with R shoulder pain. She reports date of injury to be Feb 2024. Reported mechanism of injury was from a MVA and rear ended. Skilled Therapy is necessary to address impairments, limitations, and functional deficits outlined, and return patient to their expected level of function.

Identified Impairments: decreased shoulder ROM, decreased UE strength, and TTP: long head biceps and supraspinatus.

Identified Activity Limitations/Performance Deficits Resulting from Impairments: difficulty reaching behind back and lifting overhead.

R Shoulder/Neck Pain s/p MVA in Feb, 2024

Medical Conditions

Do you have any medical condition you currently suffer from or have experienced in the past?

Yes

The patient reports the following Medical Conditions:

- Hypertension

Current Medications

The patient takes medications and/or over the counter supplements.

Medication	Dose	Frequency	Method
Amlodipine			
acetaminophen	1000 mg		

Functional Status	Prior	Current
Activities of daily living	Within normal limits	Moderate
Lifting above head	Within normal limits	Moderate
Lifting items from floor	Within normal limits	Moderate

Quick DASH

Score: 41 No. of Responses: 11 Total: 68.25

Q-DASH 68.25% disability/impairment where 0% represents ideal function.

OBJECTIVE:

Objective Performance test: see objectives.

Phase of Care: 3

Total Time-Based Treatment Codes (minutes): 23 minutes

ASSESSMENT:

Patient presents with signs and symptoms consistent with R shoulder pain. She reports date of injury to be 2 months ago. Reported mechanism of injury was from a MVA and rear ended. Skilled Therapy is necessary to address impairments, limitations, and functional deficits outlined, and return patient to their expected level of function.

Identified Impairments: decreased shoulder ROM, decreased UE strength, and TTP: long head biceps and supraspinatus.

Identified Activity Limitations/Performance Deficits Resulting from Impairments: difficulty reaching behind back and lifting overhead.

Response to Treatment: Good response to HEP therex. Progress as tolerated.

HEP/PT Instruction: see attached.

Objective measures will be used to chart progress. Pt understands and agrees with this treatment plan. The patient's rehab potential is good. The patient's discharge prognosis is good. She and/or family is aware of her diagnosis. The plans and goals have been developed and discussed with the patient. Patient consents to treatment plan and goals and gives verbal informed consent.

Goals	Short-Long	Time Frame	Result	Comment
Patient will be independent in progressive monitored HEP.	Short Term	4 weeks	New	
Patient will be able to complete all ADLs with no increase in pain	Long Term	6 weeks	New	
Improve shoulder abduction strength by 4+/5 grade to assist with ADL's.	Long Term	6 weeks	New	
Improve shoulder abduction ROM to 180 degrees to improve overhead reaching.	Long Term	6 weeks	New	
Decrease Quick DASH score by 9 MCID.	Long Term	6 weeks	New	
Improve shoulder flexion strength 4+/5 to allow patient to perform functional activities.	Long Term	6 weeks	New	

Assessment of Complexity:

Medical and Therapy History: 1-2 personal factors and/or comorbidities that impact the plan of care.

Patient Examination: Examination of body systems was completed using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions.

Clinical Presentation: With stable and/or uncomplicated characteristics.

Patient: Lelia Martinez DOB: 11-09-1948

3975 5th Avenue, Suite 100 San Diego, CA 92103-3108
Phone: (619) 238-4318 Fax: (877) 298-4204
WWW.SPINEANDSPORT.COM

Clinical Decision Making: Low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome.

Based on the documented information above, the patient complexity is determined to be low.

MIPS Quality Measures

Measure 130: Documentation of Current Medications in the Medical Record

Eligible clinician attests to documenting in the medical record they obtained, updated, or reviewed the patient's current medications.

Measure: 182: Functional Outcome Assessment

Functional outcome assessment documented as positive using a standardized tool AND a care plan based on identified deficiencies is documented within two days of the functional outcome assessment: Therex, Theract, Neuromuscular Re-education, and Functional Training.

PLAN:

The patient's treatment will include ADL Training, e-Stim unattended no wound, gait training, hot pack / cold pack, ice massage, joint and soft tissue mobilization, manual therapy, massage, mechanical traction, neuromuscular re-education, therapeutic activities and therapeutic exercises. The patient will be seen 2 times per week for 6 weeks, for a total of 12 visits.

Thank you for your referral. We will keep you updated on this patient's progress.

Best regards,

Arlyn Bacallan PT
