Test Date: 5/30/2024

Patient:	Lelia Martinez	DOB:	11/9/1948	Handedness:	Right
Sex:	---	Ref MD:	Kristopher Downing, M.D.		
ID#:	CMG-22924	DOI:	02/29/24		

HISTORY:

Ms. Martinez sustained multiple injuries during a motor vehicle accident on 02/29/2024. She reports ongoing right shoulder and neck pain with recurrent right hand and finger paresthesias.

EXAM:

Cervical motions are limited in right > left rotation and bending. Right shoulder motions are limited and painful. The sensory exam shows diminished light touch in the right middle and index fingertips. Carpal tunnel compression does not reproduce radiating pain or paresthesias.

NCV & EMG Findings:

All nerve studies are performed at skin temperatures at or above 32 degrees C. Needle electromyographic studies are performed with a sterile, monopolar needle electrode.

1. All right upper limb sensory and motor nerve studies are normal.
2. All right upper limb needle electromyographic studies are normal, including the study of the infraspinatus and cervical paraspinal muscles.

IMPRESSION:

1. There are no peripheral nerve injuries or disorders detected in the right upper limb, including median, radial, or ulnar neuropathies
2. There is no evidence of a right cervical motor radiculopathy.*

*Electrodiagnostic studies are generally insensitive to mild or sensory radiculopathies, including those with intermittent symptoms, and alone should not be used to exclude radiculopathy from the diagnosis.

RECOMMENDATIONS:

I reviewed these results with Ms. Martinez, and I asked to follow up with Dr. Downing.
